Design Choices.

The design is based on animations and colors which are liked by me that is Yellow, grey and black giving the best color combination I could think of. And the font color to be white to ease reading and the suitable font that is Poppins to bring out a formal portfolio.

Challenges Faced.

The major challenges faced were to impose appropriate CSS styling and responsiveness of the website to make the portfolio very lively and configuring the navigation bar. This issue was resolved with the help of ChatGPT and YouTube videos.

Moreover, with the limited knowledge of JavaScript I have it was hard to integrate JavaScript to the portfolio and thus took extra time to build the website than anticipated. However, with the vast resources on the internet this issue was overcome and successfully added to the website.
